

## Instruction Leaflet for "PRATLEY SP001" (English)

### GENERAL:

Pratley SP001 is a Special Performance (SP) slow curing adhesive which is ultra resistant to immersion in water and chemicals. It even resists most strong acids (including battery acid.) It sets hard and can also be applied as a screed onto surfaces to render them water and chemical resistant.

### PROPERTIES:

- Slow setting.
- Ultra resistant to acid and alkali chemical attack (not for immersion in Petrol.)
- Good adhesive strength.
- Bonds well to most rigid materials.
- Good shelf life.
- Hard but tough when set.

### TIME TO SET: (at 23 °C)

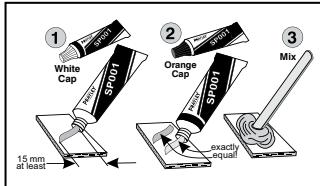

- Will gel in about 45 minutes.
- Dry to touch in 2 hours.
- Full strength in 24 hours.

### SURFACE PREPARATION:

Surfaces to be bonded must be dry and free of loose dirt, rust, paint, oil and grease. Sanding will substantially enhance adhesion to smooth surfaces.

### MIXING PROCEDURE:

- From the tube with the **white cap** squeeze out a bead of resin onto a flat non-absorbent surface such as a piece of coated cardbord (**Fig. 1**).
- From the tube with an **orange cap** squeeze out an exactly similar bead of hardener next to the first bead (**Fig. 2**).
- To ensure equal proportions, the beads should not be less than 15 mm long.
- Replace the colour coded caps on the **correct** tubes.
- Using a spatula or stick, thoroughly and vigorously mix the two beads together until an even colour is obtained (**Fig. 3**).
- Use within  $\frac{1}{2}$  hour of mixing.

### SOME SUGGESTED USES:

- Repairing items to be submerged in water.
- Repairing items in contact with battery acid.
- Repair damaged lead acid battery casing.
- Repair swimming pool plumbing.
- Mix, then screed onto surface and render it water and acid resistant.
- Coat battery housings to prevent corrosion.

### NOT RECOMMENDED FOR:

- Flexible materials.
- Constantly high temperatures (above 65°C).
- Petrol, brake fluid and acetone.

As product is used outside our control, we cannot accept liability for any possible failures.

### TIPS:

- Sand both surfaces with coarse sandpaper before bonding.
- When repairing leaky pipes. Ensure there is no pressure, then soak SP001 into cloth "bandage" and wrap around pipe.

### DID YOU KNOW?

- Pratley SP001 is electrically insulating.
- The "SP" in SP001 stands for "Special Performance."
- Pratley SP001 can be used to coat surfaces and prevent rust.

## PRATLEY SP001

(Afrikaans)

### ALGEMEEN:

Pratley SP001 is 'n "Special Performance" (SP) stadig bindende kleefstof wat uiters bestand is teen onderdempeling in water en chemikalië. Dit kan selfs die meeste sterk sure weerstaan (battery suur ingesluit). Dit set hard en kan ook as 'n deklaag op 'n oppervlak gebruik word om dit bestand teen water en chemikalië te maak.

### KENMERKE:

- Stadig bindend.
- Uiters bestand teen suur en alkaliese chemikalië aanval (moenie in Petrol onderdompel nie).
- Goeie kleefvermoë.
- Kleef goed aan die meeste onbuigsame materiale.
- Goeie raklewé.
- Hard maar taai wanneer dit geset het.

### SETTYD: (by 23 °C)

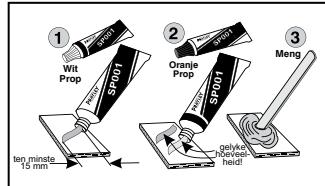

- Sal binne 45 minute verjel.
- Sal binne 2 ure droog genoeg wees om aan te raa.
- Bereik volle sterkte binne 24 uur.

### VOORBEREIDING VAN OPPERVLAKKE:

Oppervlakte wat vasegliak gaan word, moet droog wees en moet nie los stukkie ullis, roes, verf, olie of ghries op hê nie. Indien gladde oppervlakte met skuurpapier bewerk word, sal dit die kleefvermoë aansienlik verhoog.

### MENGSAANWYINGS:

- Druk 'n kralejie hars uit die buisie met die **wit prop** op 'n plat, nie-absorberende oppervlak soos 'n stukkie bedekte karton (**Skets 1**).
- Druk dieselfde hoeveelheid verharder langs die eerste kraletjie uit die buisie met die **oranje prop** (**Skets 2**).
- Om te verseker dat daar gelyke hoeveelhede is, moet die kraletjie nie korter as 15 mm wees nie.
- Plaas die kleurgekodeerde proppe terug op die regte buisies.
- Meng die twee kraletjies deeglik en vinnig met 'n spatel of stokkie totdat 'n eweredige kleur verkry word (**Skets 3**).
- Wend aan binne 30 minute nadat dit gemeng is.

### 'N PAAR VOORGESTELDE GEBRUIKE:

- Om items wat in water onderdompel word te herstel.
- Om items wat in kontak met batterysure kom te herstel.
- Om 'n beskadige loodsuur batterykas te herstel.
- Om 'n swembad se lootgieterwerk te herstel.
- Meng, plaas dan as 'n deklaag op 'n oppervlak om dit water en suur bestand te maak.
- Bedeck 'n battery omhulsel om roes te voorkom.

### WORD NIE AANBEVEEL VIR:

- Buigsame materiale.
- Aaneenlopende hoog temperature (bo 65°C).
- Petrol, remvloeistof en asetoon.

Omdat die produk buite ons beheer gebruik word is ons nie verantwoordelik vir enige moontlike mislukkings nie.

### WENKE:

- Skuur beide oppervlakte met growwe skuurpapier voor aanwending.
- As jy a lekkende pyp wil herstel. Maak seker dat daar geen drukking is nie en gebruik 'n lap "verband" wat in SP001 geweek is om oor die pyp te draai.

### HET JY GEWEET?

- Pratley SP001 is elektries geleidend.
- Die "SP" in SP001 staan vir "Special Performance."
- Pratley SP001 kan gebruik word om oppervlakte te bedek om roes te voorkom.

# PRATLEY SP001

(Português)

## GERAL:

Pratley SP001 é um adesivo de Desempenho Especial (SP) de endurecimento lento que é ultra resistente à imersão em água e produtos químicos. Ele ainda resiste a ácidos mais fortes (incluindo ácidos de baterias). Adquire uma grande dureza e também pode ser aplicado como uma argamassa em superfícies para torná-las resistentes à água e produtos químicos.

## PROPRIEDADES:

- Moldura lenta.
- Ultra resistente a ataques químicos de ácidos e alcalís (não da para imersão em gasolina).
- Boa resistência adesiva.
- Adere bem a materiais mais rígidos.
- Boa capacidade de conservação.
- Duro, mas forte quando definido.

## TEMPO PARA DEFINIR: (a 23 °C)

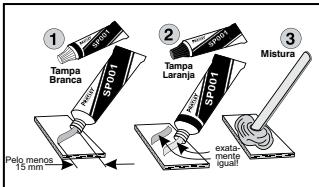

- Vai tomar forma em cerca de 45 minutos.
- Põe a secar para tocar em 2 horas.
- Potência total em 24 horas.

## PREPARAÇÃO DA SUPERFÍCIE:

As superfícies a serem coladas devem estar secas e livres de poeira, ferrugem, tinta, óleo e graxa. Lixar irá melhorar substancialmente a aderência a superfícies mais suaves.

## PROCEDIMENTO DE MISTURA:

- A partir do tubo com a **tampa branca** espreme um grânulo de resina sobre uma superfície plana não absorvente, tal como um pedaço de cartão revestido (Fig. 1).
- A partir do tubo com a **tampa laranja** espreme um grânulo de endurecedor exactamente semelhante ao lado do primeiro cordão (Fig. 2).
- Para garantir proporções iguais, os grânulos não devem ser inferior a 15mm de comprimento.
- Volte a colocar as tampas de cor codificadas nos tubos **corretos**.
- Usando uma espátula ou vara, cuidadosamente e vigorosamente misture os dois grânulos juntos até a cor uniforme é obtida (Fig. 3).
- Use dentro de  $\frac{1}{2}$  hora de mistura.

## ALGUMAS SUGESTÕES DE USO:

- Reparar itens para serem submersos em água.
- Reparar itens em contato com o ácido de bateria.
- Reparar a caixa da bateria de chumbo-ácido.
- Reparar o encanamento da piscina.
- Misturar em seguida, nivelar a superfície e torná-la resistente à água e ácido.
- Tapar as caixas de bateria para evitar a corrosão.

## NÃO É RECOMENDADO PARA:

- Materiais flexíveis.
- Temperaturas constantemente elevadas (acima de 65°C).
- Gasolina, fluido de freio e acetona.

Como o produto é utilizado fora de nosso controle, não podemos aceitar a responsabilidade por eventuais falhas.

## DICAS:

- Lixe ambas as superfícies com papel de lixar grosso antes de colar.
- Ao reparar canos furados. Certifique-se de que não há pressão, em seguida, mergulhe SP001 em pano "ligadura" e enrolhe em torno do tubo.

## VOCÊ SABIA?

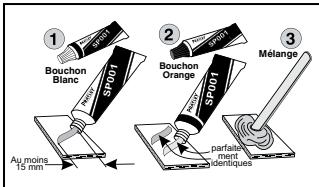

- Pratley SP001 é eletricamente isolante.
- O "SP" em SP001 significa "Desempenho Especial."
- Pratley SP001 pode ser usado para revestir superfícies e evitar ferrugem.

# PRATLEY SP001

(Français)

## DESCRIPTION:

Les Colles Pratley SP001 sont des adhésifs de Performance Spéciale (PS) à adhésion lente et ultra résistantes à l'immersion dans l'eau et aux produits chimiques. Elles résistent même aux acides les plus forts (y compris acides de batteries). Elles s'adhèrent très fortement et peuvent s'appliquer également comme revêtement sur les surfaces pour les rendre résistantes à l'eau et aux produits chimiques.

## QUELQUES SUGGESTIONS D'UTILISATION:

- Réparation d'objets à immerger dans l'eau.
- Réparations d'objets en contact avec les acides de batteries.
- Réparation pour revêtement de plombs endommagés par les acides de batteries.
- Réparation de matériaux de plomberie de piscines.
- Mixer et étaler sur la surface pour la rendre résistante à l'eau et à l'acide.
- Badigeonner sur les batteries pour éviter la corrosion.

## USAGE DÉCONSEILLÉ:

- Application sur des matériaux flexibles.
- Applications soumises à des températures élevées (supérieures à 65°C).
- Essence, huile de frein et acétone.

Le produit étant utilisé en dehors de notre contrôle, nous n'acceptons aucune responsabilité pour les éventuelles défaillances.

## CONSEILS:

- Poncer ou frotter les deux surfaces avec du grattoir gros grain avant de les lier.
- Pour la réparation des tuyaux qui ont des fuites. S'assurer qu'il n'y a pas de pression et ensuite plonger le SP001 dans un bandage de pagne et l'enrouler autour du tuyau.

## LE SAVIEZ-VOUS?

- Pratley SP001 est un isolant électrique.
- Le "PS" dans le PS001 signifie "Performance Spéciale."
- Le Pratley SP001 peut être utilisé pour revêtir les surfaces contre la rouille.

## TSOHELE:

Pratley SP001 ke sekgomaretsse sa Tshebetso e lkigethileng (*Special Performance - SP*) se nkang sebaka ho oma e se keneng metsi le dikhemikale. E hanelia le diesete tse matla haholo (ho kenyelletsu esete ya mashala). E dula ka thata mmre e ka tlotsuwa jwalo ka ho fotswa konkrete dibakeng hi dietsa hore tse seke tsu kena metsi le ho sa amuwe ke dikhemikale.

## BOKGONI:

- Enka ho oma.
- E matla haholo kgahlanong le diesete le khemikale tsu ditshepe tse entsweng ka matswai (eseng bakeng sa ho kenywa kahara petroleo).
- E na le matla a matle a ho kgomaretsa.
- E kgomarela hantle manterafeng e mengata e nang le botitslo.
- E ka dula sebaka se setelele e sa sebediswe.
- E thata empa e manganga ha e se ekgomaretsse.

## NAKO YA HO E BEHA: (23 °C)

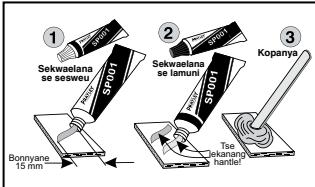

- E tla kopana metsotseng e 45.
- E tla be e omme hore e ka tshwarwa nakong ya dihora tse 2.
- Matla a felletse dihoreng tse 24.

## TOKISO YA SEBAKA:

Dibaka tse tlo mamaretswang ditswhanelia ho hloka ditsihla, ho rusa, pente, mafura le kerise. Ho sangta ho tla oketsa kgomarello dibakeng tse boreledi.

## TATELO YA HO E KOPANYA:

1. Ho tswa tjupung ya **sekwaelanana se se sweu** pepetella lero hodima sebaka se manameng se sa monyeng jwaloa lepolanka (**Ponts. 1**).
2. Ho tswa tjupung ya **sekwaelanana se lamuni** pepetella lero le tshwanang la setisetsete pela la pelta (**Ponts. 2**).
3. Netefatsa hore dikarolelo di ya lekana, maro ha a tshwanelia hoba botelele bo katlasa 15 mm.
4. Beha dikwaelana tse naeng le mmala ditjhupung tse loketseng.
5. Ka lefahlo kapa thupa e sesame, ka phethahalo le matla kopanya maro a mabedi mmoho ho fihela mmala o tshwana (**Ponts. 3**).
6. E sebedise nakong ya  $\frac{1}{2}$  ya hora kamora ho kopanya.

## MESEBETSI E MENG:

1. Bakeng sa ho lokisa disebediswa tse tlo kengwa kahara metsi.
2. Ho lokisa dintho tse kopaneng le esete.
3. Ho lokisa bokante ba mashala/dibeteri tse entsweng ka esete.
4. Ho lokisa tsamaiso ya metsi kappa dipompo tsa matangwana a lapeng a ho tola.
5. Ho kopanya, e be o lahela hodima sebaka se tse sebedisweng hore se seka sa kena metsi le esete.
6. Ho kwaela mashala/dibeteri hore di seka tsa senyeha.

## HA YA ROTLOELLETSWE BAKENG SA:

- Dintho/materale e sothehang.
- Thempheratherang e hodimo (ka hodima 65°C).
- Petrole, oli ya maboriki, le oli e entsweng ka dikhemikale.

Jwaloaha sesebediswa se sebedisetswa kantle ho taolo ya rona, re ka se neke boikarabelo ba ho holeha ho sebetsa hwa sona.

## DIKELETSO:

- Santa dibaka ka bobedi ka pampiri ya santa pele o mamaretsa.
- Hao lokisa disebediswa tsa metsi tsedotlang (dipapye) netfatsa hore hahona metse atlang kapa atswang, haofetsa kopanya SP001 lelesila le okwalgang kalona, haofetsa lemamaretse hosesbediswa seo osilukisang.

## NAA O NE O TSEBA?

- Pratley SP001 e sebedisana le motlakase.
- “SP” e ho SP001 e emetse “Special Performance.”
- Pratley SP001 e ka sebedisetswa ho kwahela dibaka le ho qoba rusi.

# PRATLEY SP001

(Zulu)

## ULWAZI NGAYO:

I-Pratley SP001 iyingcina ethatha isikhathi ukubamba iqine, kodwa engaxebuki ngisho nomu ifakwe emanzini nomu kumakhemikhali. Ikwazi ngisho nokumelana nama-asidi anamandla (kuhlanganile iyaqina ngakho ingacotshwa entweni ukuze ingangenna amanzi nomu amakhemikhali).

## UKWAKHEKA KWAYO:

- Ayinamathele ngokushisha.
- Ikwazi ukumenalana ne-asidi nolungu iketshezi oluyingozzi (akufanele icilwisse kuphethiloli).
- Uma isinamathele iqina ngempela.
- Inamathele kahle ezintweni eziningi ezinqinile.
- Ayonakali nomu igcinwe eshalofini isikhathi eside.
- Aiyithambile neze kodwa ibamba iqine uma isinamathele.

## ISIKHATHI SOKUNAMATHELA: (ezingeni elingu-23 °C)

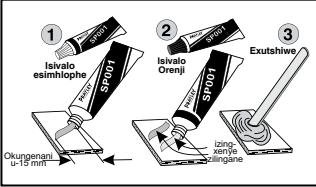

- Iqala ukushuba emizuzwini engu-45.
- Isuke isiqinile emahoreni amabili.
- Ibamba ngokuphelele emahoreni angu-24.

## UKULUNGISELA UKUNAMATHELISA:

Indawo ezonanyathelisa kufanele ingabi nokungcoola okusukayo, ukuleka kwensiimbi, upende, uwoyela nogrishi. Ukukuhla nge-sandpaper kuzokwenza izindawo ezbishellelezi zinamathele kangcongo.

## INDELELA YOKUYIXUBA:

1. Eshubhini **elinivesinala esimhlophe**, putshuzela ingxene encane entweni engeke iyimunce njengkhadihodi. (**Isithombe 1**).
2. Eshubhini **elinivesinala orenji**, putshuzza ingxene elingana nciamashi neyokuqala uyibekke eceleni keyokuqala. (**Isithombe 2**).
3. Ukuze uqisinsise ukuthi lezi zingxene zengcina ziyalingana ngempela kufanele zingabi ngaphansi kuka-15 mm ubude.
4. Buysela izivalo emashubhini azo **afanele**.
5. Usebenzisa iphiri nomu induku eqathla, bonda lezi zingxene ezmibili uziuxabanane zize zibe umbala owoewa. (**Isithombe 3**).
6. Yisebenzise ingakapheli imizuzu engu-30 ngemva kokuyixuba.

## EZINYE IZINDLELA ZOKUYISEBENZA:

1. Ukonamathelela izinto ezizohale zicwile emanzini.
2. Iungisa izinto ezilinyazwe yi-asidi yebhetri.
3. Iungisa amakesi okufakwa kuwo amabuthi ne-asidi.
4. Ukulungisa amapayipi asechibini lokubhukuda (swimming pool).
5. Yixube, bese uygocoba entweni ongafuni ingenje amanzi ne-asidi.
6. Gcoba ngayo izindawo ogcina kuzo amabuthri ukuze zingadlek.

## OKUNGAMELWE KWENZIWE NGAYO:

- Ukonamathelela izinto ezithambile nezitbezelayo.
- Ukyisebenzisa entweni ehlale isisha kakhulu (ngapezu kuka-65°C).
- Ukyisebenzisa kuphethiloli, amafutha ebhuleki ne-acetone.

Njengoba ukusetshenzisa kwalo mkhiziso kungala-wulwula yithina, akulona jiphutha lethu uma ungasebenzanga ngendlela eyimpumelelo.

## AMACEBISO:

- Khuhla zombili zingxene ezizonanyathelisa nge-sandpaper ngaphambi kokuzinamatheleza.
- Lapho uphesha amapayipi avuzayo, kufanele kungabi nalutho phakathi, yibe usucwilisa indwangu kuya-SP001 bese uyzongolozela epayipini njenggebhandishi.

## INGABE BEWAZI?

- I-Pratley SP001 ingasebenza njengesembozo sezintampo zikagesi.
- Isinhlamvu ezithi SP egameri elithi SP001 zimelela ukuthi “Special Performance” okusho ukuthi isebezenza ngezinga elikhethelikile.
- I-Pratley SP001 ingasetshenziselwa ukwembaza izinto nokuvikela ukudleka.
